

# New EU Tyre Label - What you need to know

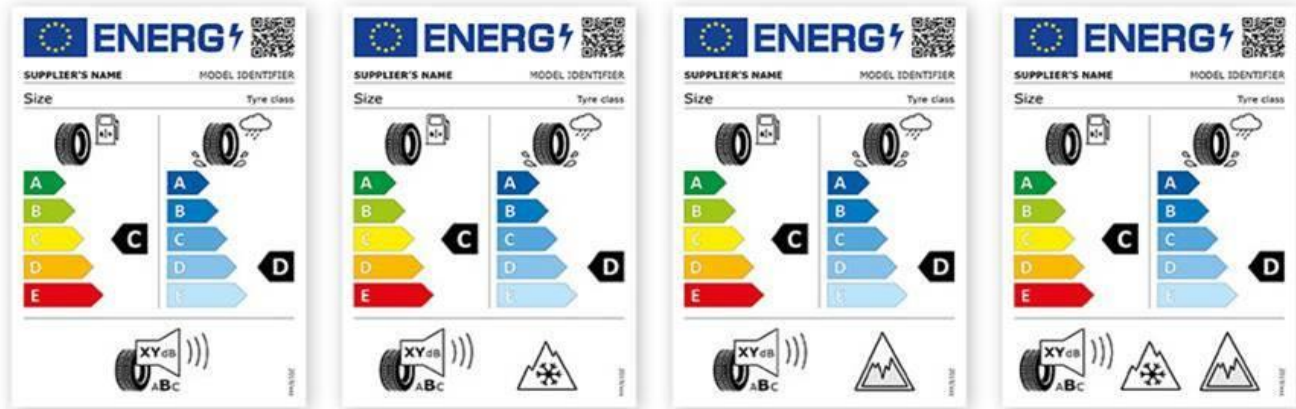

Starting from 1 May 2021, new rules:

**maximising safety**

**minimising environmental impact**

The new system will only have 5 grades from A to E.

## Fuel efficiency & noise levels

- The fuel efficiency class ranges from A (most efficient) to E (least efficient).
- 'A' tyre = less rolling resistance & lower energy costs.
- The external noise class ranges include A (less noise outside the vehicle) and B (more noise).

You can find more information on the European Commission page: [Tyres.](#)

## Wet grip performance

- Tyres will no longer be allowed in classes F and G for rolling resistance and for wet grip, which is why the new scale has only 5 classes (A to E).
- Info on tyres that are specifically designed for use in severe snow & ice conditions should be included on the tyre label.
